

Bi-component epoxy undercoat with barrier effect, suitable for insulating protection of all types of surfaces (wood, iron, aluminum and fiberglass). To be employed both as an insulating primer and as an undercoat for a suitable preparation for enameling. It can be overpainted with two-component products after suitable sanding.

Product information

Finish	Matt	
Colour	White .153	
Solids (by volume)	ASTM D2369	50 ± 2%
Specific gravity	UNI EN ISO 2811-1	1,36 ÷ 1,40 g/cm³
Flash point	UNI EN ISO 13736	28 °C
VOC (calculated average content)	ISO 11890-2/2006	451 g/l
Packaging	0,75 – 2,5 Lt	

Application and use

SURFACE PREPARATION

Wash by pressure with fresh water and remove any residual of oil and grease. It is recommended to apply EPOWAY on substrates previously treated with well cross-linked and seasoned products. Sand with abrasive paper P220-240. The substrates must be cleaned and prepared in an appropriate manner. Before painting, check that all surfaces are perfectly dry, clean, free of oils, greases and other contaminants.

<u>Fiberglass</u>: Degrease the surface to be treated with a solvent or suitable detergent. Pressurize with fresh water and remove all traces of oil and grease. All surfaces to be painted must be clean, dry and free of contaminants. Sand with 320/400 paper and vacuum to remove all residual sanding and any dust or dirt. Then blow with clean, dry air.

This product is provided in two tins to be mixed entirely and carefully before use. In case it isNotesrequired, dilution has to be performed after the mixing of the two components. The physical
data of two-component products refer to components that have been already mixed.

Drying time

Temperature °C		10		15		20		30		
		Min	Max	Min	Max	Min	Max	Min	Max	
Coverage	Epoxy products or polyesters	<u>}</u>	24 h	4 days	24 h	4 days	18 h	3 days	8 h	2 days
Sanding		0	48 h		36 h		24 h		18 h	
Full curing		7 days		7 days		7 days		7 days		

N.B. <u>The drying times and the overcoating intervals increase with higher thickness of the applied film.</u> Always check that the existing painting film is perfectly dry before applying a further product coat.

CONDITIONS DURING APPLUICATION

In order to avoid the formation of condensation, the temperature of the surface should be at least 3 °C above dew point. During the application and curing the min. ambient temperature must not be lower than 10 °C or higher than 30 °C; substrate temperature must not be lower than 5 °C, since curing is remarkably reduced at lower temperatures. Application is not advisable when relative humidity exceeds 80%. The term-hygrometric survey should be carried out near the surface to be coated. Make sure there is enough ventilation when the application takes place in closed areas.

Storage

It is recommended to avoid exposure to air and extreme temperatures. To maximize the shelf life in the can, it is good to check that the container is well closed during the storage and the temperature is between 10 °C and 35 °C. Avoid exposure to direct sunlight.

Safety rules

Observe the provisions of DPR 303 and 547. Avoid contact with the skin, for example. Operate in well ventilated places and, if in closed areas, use vacuum cleaners, fans and air conveyors. During the application use appropriate protections (masks, gloves, glasses, etc.). Before using, read sections 7-8 of the SDS.

INSTRUCTIONS FOR THE DISPOSAL OF PRODUCTS AND PACKAGING

Empty packaging that contained products: Dispose of empty packaging according to the requirements of the waste disposal law, for example by taking them to the recycling center. Packages containing the unused products: Dispose of the unused product in accordance with the law of disposal of such waste, for example by taking it to a recycling center, recycling of packaging is prohibited in this case. Do not empty into drains or watercourses. Product packaging must be kept indoor, and the temperature in the storage place must be between 10 °C and 35 °C. Do not expose to sunlight.

Notes

The values indicated in the present technical sheet can have slight variations from one batch to another. The applied product must not come in contact with water, chemicals or subjected to mechanical stress before the curing is complete. The wet film thickness is referring to the undiluted product. In case of dilution, this value increases. The above information is the result of accurate laboratory tests and practical experience, however, since the product is predominantly used outside the manufacturer's control, Boero Bartolomeo S.p.A. can only guarantee their quality. The information contained in this sheet may be subject to revision by the Company. For clarification, updates or further information, it is recommended to contact Boero Bartolomeo S.p.A. directly. The present datasheet annuls and replaces every other precedent to this one.
